

BASEPLATE CARDON JOINT TENDON HD

Baseplate Tendon Joint Cardan HD (U-Pin) combines Unifiber's tendon joint core with a mechanically hinging top. Suitable for all windsurfers, this baseplate design can be particularly appreciated by windfoilers. With its cardan hinge, attaching the sail – whether on the beach or in the water – is simple, with no need to flip the board or manually bend the tendon. The easy-release option allows keeping the base attached to the board and not losing its fine-tuned position in the mast track.
